

GANESH BACHHAO Senior .NET & Azure Backend Engineer | Technical Lead

Pune, India | +91 9423263383 | ganesh.bachhao@gmail.com | <https://www.linkedin.com/in/ganeshbachhao/>

PROFESSIONAL SUMMARY

Senior Software Engineer / Technical Lead with 10+ years of experience in designing and delivering scalable enterprise applications using .NET Core, C#, ASP.NET Web API, Angular and Microsoft Azure. Strong expertise in backend architecture, cloud modernization, microservices design, and API development.

Proven track record of leading monolith-to-microservices migration, optimizing system performance, and building reusable, secure, and scalable backend services. Experienced in Agile environments with cross-functional collaboration across Product, QA, and DevOps teams.

Core focus: Cloud-native backend systems, distributed architecture, API platforms, and enterprise modernization.

CORE SKILLS

Backend: C#, .NET Core, ASP.NET Core, Web API, Microservices

Frontend: Angular, TypeScript (supporting full-stack delivery)

Cloud: Microsoft Azure (App Services, Functions, Storage, Key Vault, Application Insight)

DevOps: Azure DevOps CI/CD, GitHub, GitHub Actions (exposure)

Databases: SQL Server, MySQL (Performance tuning, Indexing, Stored Procedures)

Architecture: Microservices, Clean Architecture, SOLID, Design Patterns, Event-Driven, Distributed System

Integration: REST APIs, OAuth2, JWT, Punchouts (cXML)

Other: Azure OpenAI (basic integration), Monitoring (Application Insights)

PROFESSIONAL EXPERIENCE

TECHNOLOGY LEAD / ARCHITECT Infosys Ltd, Pune, India | Jul 2017 – Dec 2025

Key Contributions: • Designed and developed scalable backend services using ASP.NET Core and Web API supporting enterprise-grade applications with high availability and performance

- Led migration of legacy monolithic systems to modular microservices architecture with zero-downtime deployment strategy
- Built secure REST APIs using OAuth2 and JWT for cross-system enterprise integrations
- Designed reusable backend components and shared services, reducing duplication across multiple product lines
- Implemented asynchronous background processing and scheduled jobs for high-volume data workflows
- Developed CI/CD pipelines using Azure DevOps, reducing deployment time by 60%
- Improved SQL Server performance by optimizing queries, indexing strategies, and caching, achieving up to 30% response time improvement
- Integrated Azure Application Insights for monitoring, logging, and system observability
- Introduced AI-assisted workflows using GitHub Copilot and Azure OpenAI for document automation use cases
- Participated in architecture discussions, technical design reviews, sprint planning, and release planning
- Mentored developers and enforced clean code, testing standards, and best practices

Key Impact: • Improved system scalability and maintainability by transitioning monolith systems to microservices-based architecture

- Increased deployment efficiency and reduced operational overhead through automation and CI/CD adoption

SENIOR SOFTWARE ENGINEER VARStreet, Pune, India | May 2012 – Jun 2017

Key Contributions: • Developed enterprise web applications using ASP.NET MVC, C#, Web API, and Angular

- Built large-scale ETL and background processing systems handling 1M+ records per day with robust error handling
- Designed and optimized SQL Server stored procedures and multi-tenant database systems
- Developed REST APIs for multi-system integration and business workflow automation
- Implemented scheduled jobs for data processing and system synchronization
- Maintained unit testing frameworks and enforced code quality through peer reviews

Key Impact: • Improved data processing reliability by 35% through robust retry and error-handling mechanisms

- Enhanced system efficiency for enterprise operations through optimized database design and API improvements

KEY PROJECTS

Enterprise Modernization & Cloud Transformation (Infosys)

- Led backend modernization initiative by decomposing monolithic applications into Azure cloud
- Designed reusable service architecture used across multiple enterprise applications
- Implemented secure API layer with OAuth2/JWT authentication
- Enabled cloud deployment using Azure DevOps CI/CD pipelines

High-Volume Data Processing Platform (VARStreet / Infosys)

- Built asynchronous processing system handling large-scale nightly data workflows (1M+ records)
- Implemented retry mechanisms, logging, and failure recovery strategies
- Improved system reliability and operational monitoring capabilities

AI-Assisted Document Processing (Infosys)

- Integrated Azure OpenAI capabilities into enterprise workflows
- Implemented AI-assisted document automation for productivity improvement
- Enhanced developer productivity using GitHub Copilot integration

TECHNICAL LEADERSHIP

- Led backend engineering deliverables for enterprise-grade applications
- Defined coding standards, reusable design patterns, and architecture guidelines
- Conducted code reviews and mentored junior engineers
- Contributed to technical estimation, risk analysis, and release planning
- Collaborated with stakeholders in Agile/Scrum environments

EDUCATION

Master of Computer Applications (MCA), Savitribai Phule Pune University, Pune | 2006 – 2009

LANGUAGES

English – Professional

Marathi – Native

CAREER TARGET

Target Roles: Full Stack Developer | Senior .NET Backend Engineer | Technical Lead | Technical Architect
