

GANESH BACHHAO

Senior .NET Developer | Senior .NET Backend Engineer | Technical Lead

Pune, India | **Immediate Joiner** | **Open to Remote Opportunities**

+91-9423263383 | ganesh.bachhao@gmail.com | LinkedIn: <https://www.linkedin.com/in/ganeshbachhao>

PROFESSIONAL SUMMARY

Technology Lead with over 12+ years of experience in developing enterprise applications using C#, ASP.NET Core, Azure, SQL Server, REST APIs, and Gen-AI. Experienced in modernizing legacy applications, building cloud-based solutions, implementing CI/CD pipelines with Azure DevOps, and improving application performance and reliability. Worked across e-commerce, healthineers, and manufacturing domains, collaborating with cross-functional teams to deliver business-critical applications. Strong background in software design, secure API development, database optimization, and Agile delivery. Hands-on experience with Azure OpenAI and GitHub Copilot for building AI-assisted business solutions. Looking to contribute my technical and leadership experience in a Senior .NET, Azure, or Technical Lead role.

Core focus: Cloud-native backend systems, distributed architecture, API platforms, and enterprise modernization.

CORE SKILLS

Backend & Languages: C#, .NET Core, ASP.NET Core, Web API/ RESTful API, LINQ, cXML, Delegates

Frontend UI: Angular, TypeScript, RxJS, Modern Component Architecture

Cloud & Infrastructure: Azure PaaS (App Service, Azure Functions, Key Vault, Storage, Application Insights, Azure OpenAI)

DevOps & CI/CD: Azure DevOps, Git, GitHub, Automated Deployment, Release Management

Databases & Analytics: SQL Server, MySQL, Query Optimization, Stored Procedures, ETL

Architecture Patterns: Domain-Driven Design (DDD exposure), CQRS, Event-Driven Architectures, Clean Architecture,

SOLID Principles, Design Patterns

Testing & Quality: Unit Testing Frameworks (e.g., xUnit, NUnit), Mocking Frameworks, Test-Driven Development (TDD)

Concepts, Code Reviews, Quality Gates

Security & Compliance: OAuth2, JWT, Zero-Trust Architecture Patterns, Secure Configuration Management

AI & Modern Tooling: Azure OpenAI Integration (GPT-4), GitHub Copilot, AI-Assisted Development

Methodologies & Leadership: Agile / Scrum Delivery, Technical Mentoring, Architecture Governance, Cross-functional

Planning, Stakeholder Coordination

PROFESSIONAL EXPERIENCE

TECHNOLOGY LEAD / ARCHITECT Infosys Ltd, Pune, India | Jul 2017 – Dec 2025

Tech Stack: C#, .NET 8/7/6, ASP.NET Core Web API, Azure App Service, Azure Functions, Azure DevOps, Application Insights, SQL Server, Angular, OAuth2, JWT, Azure OpenAI

- Led the design and development of enterprise backend applications using ASP.NET Core and Azure, supporting business-critical APIs that handled over 500k+ requests per day while maintaining high availability in production.
- Worked closely with development and operations teams to deliver reliable backend services with a production uptime of around 99.9%.
- Helped modernize a legacy monolithic application by breaking it into ASP.NET Core microservices hosted on Azure, making deployments simpler and allowing individual services to be released independently.
- The migration reduced release effort and shortened deployment cycles by approximately 40%.
- CI/CD Automation: Built automated Azure DevOps CI/CD pipelines with build validation and deployment approvals, reducing deployment time from several hours to around 90 minutes while minimizing manual deployment issues.
- Standardized deployment processes across environments, making releases faster and more consistent.

- **Performance Engineering:** Improved application performance by analysing SQL execution plans, optimizing indexes, and tuning stored procedures, resulting in noticeably faster API response times.
- Resolved several recurring database performance issues that had been affecting production stability.
- **Security Architecture:** Implemented centralized authentication and authorization using OAuth2 and JWT through an API Gateway, providing secure access for internal applications and external partner integrations.
- Added rate limiting and common security policies to ensure consistent API access across multiple services.
- **Enterprise Observability:** Set up Azure Application Insights for application monitoring, custom dashboards, and production alerts, making it easier for the team to identify and troubleshoot issues.
- Improved production visibility and helped reduce the time required to detect application problems.
- **AI Innovation Workflow:** Built and deployed an Azure OpenAI-based document processing solution that automated parts of the document review workflow and reduced manual effort for the operations team.
- Worked with business stakeholders to move the solution from proof of concept into production.
- **Partner Integrations:** Developed REST APIs for external partners, enabling secure integration with internal business systems.
- Improved the onboarding process by providing standardized APIs and documentation, allowing new partner integrations to be completed in a few days instead of several weeks.

SENIOR SOFTWARE ENGINEER VARStreet, Pune, India | May 2012 – Jun 2017

Tech Stack: ASP.NET MVC, C#, Web API, Angular, SQL Server, ETL Pipelines, IIS, Background Multi-threaded Processing, Multi-Tenant

- **High-Volume Ingestion & ETL:** Designed and developed asynchronous ETL and background processing services to import supplier product data using XML and REST-based integrations.
- Supported the processing of over one million product records each day, helping keep pricing and inventory synchronized across multiple supplier systems.
- **Enterprise B2B Platform:** Developed core backend modules for a multi-tenant B2B e-commerce platform used by more than 300+ corporate customers.
- Built services supporting the quote-to-order process, focusing on performance, scalability, and reliable transaction processing.
- **Database Infrastructure Optimization:** Improved SQL Server database performance by optimizing queries, indexes, and stored procedures for a multi-tenant application.
- Reduced query execution time and improved overall system performance, allowing the platform to handle increased transaction volumes without major infrastructure changes.
- **System Reliability Engineering:** Improved the reliability of background processing services by implementing retry policies, circuit breakers, and dead-letter queue handling.
- Reduced processing failures and manual support effort while improving the stability of scheduled and asynchronous jobs.
- **Partner Integrations:** Developed REST APIs that enabled external vendors and business partners to integrate with the platform securely.
- Standardized API interfaces and documentation, reducing the time required to onboard new integration partners.
- Reduced partner onboarding from several weeks to a few business days by providing standardized REST APIs and integration documentation.

KEY PROJECTS

Enterprise Modernization & Cloud Transformation

- Worked on modernizing legacy backend applications by gradually breaking monolithic systems into cloud-based services using ASP.NET Core and Microsoft Azure.
- Designed reusable backend components and common service frameworks that were used across multiple enterprise applications.

- Developed secure REST APIs with OAuth2 and JWT-based authentication to provide consistent and secure access across applications.
- Set up Azure DevOps CI/CD pipelines to automate application deployments and improve the overall release process.

High-Volume Data Processing Platform

- Developed asynchronous background services to process large volumes of supplier and business data through scheduled ETL jobs.
- Built retry mechanisms, logging, and error-handling processes to improve the reliability of background jobs and reduce manual intervention.
- Optimized monitoring and troubleshooting by implementing application logging and operational alerts, helping the support team identify issues more quickly.

AI-Assisted Document Processing

- Integrated Azure OpenAI services into an enterprise application to automate document processing and reduce manual effort.
- Developed AI-assisted workflows for document classification, information extraction, and summarization based on business requirements.
- Worked with business users to identify suitable use cases for AI and integrated the solution into existing application workflows.
- Built REST APIs using ASP.NET Core to securely consume Azure OpenAI services and handle AI responses.
- Implemented prompt management and response validation to improve the consistency and quality of AI-generated results.

EDUCATION

Master of Computer Applications (MCA), Savitribai Phule Pune University, Pune | 2006 – 2009

LANGUAGES

English – Professional Marathi – Native

CAREER TARGET

Target Roles: Full Stack Developer | Senior .NET Backend Engineer | Technical Lead | Technical Architect
